

INTRA 

Introduction of computer vision for the event sector

We let computers see our world

Centi||ien

About us

Centillien in a nutshell

- Specialist in Computer Vision and Artificial Intelligence.
- Because the world gets shape through images, information gathered from pictures has huge value.
- Intra is our software platform for Computer Vision which is strategic for us.
- The event industry is an important market for us, we see a lot of applications there.

What is computer vision and what is Intra

- Computer vision is image recognition with the use of Artificial Intelligence.
- Using that technology it is possible to recognize people, animals and things.
- You can relate things to the environment and even analyze (human) behavior.
- Computer vision applications have similar characteristics
 - First step is a detection of what is interesting (object, human, etc..).
 - Determine the context or what needs to be analyzed in relation to other objects
 - Taking a measurement like distance, time, temperature (not always)
 - Detection of abnormal circumstances
 - Take action (change band speed, warning or instruct a robot)
 - Improve the model by training till the optimum is reached.
- Intra is the platform developed by Centillien that is created to stabilize these steps and speed up the development of new applications.

The origin of Intra

From chat to computer vision

Example videos Intra

(click the thumbnails to watch the videos)

Catch thieves

Track people anonymous

Check Covid-19 compliance

Measure distance

Follow suspects

Count eggs

Applications for events

- Intra can measure the temperature of incoming visitors to determine whether they have a fever or not.
- Subsequently, Intra was trained to recognize whether people keep a distance of 1.5 meters.
- Group formation outside the legally permitted size is also a standard function.
- Intra can project the results on a screen in real time so that people become aware of violations.
- All this is completely anonymous and in accordance with European privacy legislation.

Measuring distance and temperature

Topview

The screenshot displays a Linux desktop environment with a terminal window in the foreground. The terminal shows system logs and the output of the 'free -m' command. The background features five camera feeds labeled Camera D03 through Camera D08, each showing a top-down view of a room with green bounding boxes indicating detected objects. The desktop includes a sidebar with application icons and a file manager window showing metadata files.

 **USP's**

- With Intra we can speed up the introduction of new appliances with a stable platform.
- Not only detection of people, animals or things, but also behavior.
- Multiple possible measurements.
- Scalable by the use of latest technology
- Modular, so easy to incorporate new application components.
- Proven use cases.

Backup sheets

Some of our work

- Dutch Department of economic affairs. Measure compliancy to corona rules,
- Dutch department of Defence, predictive profiling. Recognize suspicious behavior
- Vencomatic, recognize and count eggs in industrial stables around the world.
- Univerity of Wageningen. Recognize animals for research of migration patterns
- Van Wanrooij, predict housing prices on street level (nationwide)
- Essent Belgium, chatbot with emotion detection.

Medical application

Detect plant damage

Dashboard Devices Leren Help Loguit

Plantschade waarschuwingssysteem

Analyse heeft de volgende Symptomen gevonden

- Stemphylium
- Aardvlooiën
- Meeldauw

[Bekijk waarnemingen](#)

Recognize and count animals

Conclusie:
'dutch_name': 'Witstaarthert'
'scientific_name': 'Odocoileus virginianus'
'animal_count': 2

Recognize and count eggs

Baking bread

Behavior analyses limbs vs posture

Remark: Using limbs to recognize behavior is more reliable on short distance, but by posture it is also possible with greater distance
